AWARD-WINNING NAIL PRODUCTS

THE IBX[®] SYSTEM

Before You Start

As with all nail products, avoid skin or eye contact. If redness, itching or rash occurs, discontinue use. If client has had previous nail product reactions, do not apply.

Applying the **IBX SYSTEM** requires a heat source. The target temperature is 105 - 110F or slightly warmer than a Jacuzzi.

We recommend one of these two options:

1. A basic table lamp with a 75-100 watt bulb, held 6-8 inches away
2. A nail polish dryer, set to warm

After you penetrate the product into the upper layers of the nail plate with gentle heat, the **IBX SYSTEM** will require curing with either an LED or UV style lamp. Cure time should be based on the manufacturer's suggested cure time for their gel polish color coat.

IBX® FIRST APPLICATION

FOR UNDER GEL POLISH AND NATURAL NAIL

Always start with a clean bare nail that has been filed and shaped.

Cleanse with your preferred cleanser. We recommend Cinnatize™ by Famous Names.

► First is REPAIR if and when needed.

- 1. APPLY** A thin layer of **REPAIR** where needed.
 - Entire nail for gel polish.
 - Only where there is visible damage for natural nails.
- 2. HEAT** Gentle heat for **1** minute (you may use a nail polish dryer set to warm or a table lamp with a 75-100 watt bulb).
- 3. BLOT** Lightly blot the excess from the surface if needed.
- 4. CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
- 5. CLEANSE** With your preferred cleanser. We recommend Cinnatize™.

► Now it's time for IBX.

When doing a client's first **IBX** treatment, you will need to apply **IBX TWICE**.

- 1. APPLY** Gently shake **IBX** and apply a thin layer over the nail plate.
- 2. HEAT** Gentle heat for **4** minutes (you may use a nail polish dryer set to warm or a table lamp with a 75-100 watt bulb).
- 3. BLOT** Lightly blot the excess from the surface if needed.
- 4. CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
- 5. CLEANSE** With your preferred cleanser. We recommend Cinnatize™.

► Now we'll repeat those five steps for a second application of IBX.

- 1. APPLY** Gently shake **IBX** and apply a thin layer over the nail plate.
- 2. HEAT** Gentle heat for **2** minutes.
- 3. BLOT** Lightly blot the excess from the surface if needed.
- 4. CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
- 5. CLEANSE** With your preferred cleanser. We recommend Cinnatize™.

Now you're ready to go on and do your Gel Polish or your natural nail manicure as you normally would.

Remember: **IBX** does not replace your Gel Polish or your natural nail base coat!

IBX[®] ONGOING APPLICATION

FOR UNDER GEL POLISH AND NATURAL NAIL

For ongoing IBX treatments, follow the same instructions for **REPAIR** if **REPAIR** is needed.

Apply only one application of IBX during each follow-up appointment. You only have to use your heat source for 2 minutes!

► Always follow the 5 simple steps.

- 1. APPLY** Gently shake IBX and apply a thin layer over the nail plate.
- 2. HEAT** Gentle heat for 2 minutes.
- 3. BLOT** Lightly blot the excess from the surface if needed.
- 4. CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
- 5. CLEANSE** With your preferred cleanser. We recommend Cinnatize™.
